

# EMF Adapter for Vehicles

\$89.95

## Protect Yourself From Harmful Electromagnetic Fields in Your Vehicle

Similar to the SafeSpace EMF Adapter, the Vehicle Plug uses your car's electric circuitry to clear and protect you from the vehicle's harmful electromagnetic fields when you are on the road.

Product Details: Range: radiates a transformative field through the electrical circuitry of the entire vehicle clearing all electronics  
Includes: 2 USB ports for charging devices

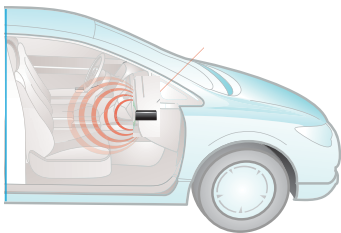

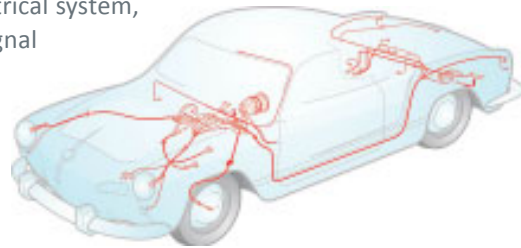

## EMF dangers on the road

Cars, trucks and other vehicles are full of electrical systems that create EMFs. Everything from the ignition system to the air conditioning uses electric power – and generates EMFs. The danger is even greater in hybrid or electric cars, because they have more extensive electrical systems.

Adding to the problem is that many roads run near high-voltage power lines and past cell towers, which also produce EMFs. As you drive, you and your passengers are exposed to dangerous toxins from both inside and outside your car.

The SafeSpace Vehicle plug transforms the vehicle's entire electrical system, carrying a corrective signal through the whole car.

Keep your mobile devices charged with the 2 USB ports in the Adapter

## Just plug it in and drive

The SafeSpace Vehicle Plug uses your car's electrical system to carry a corrective signal throughout the car. As soon as you plug it into your car's cigarette lighter, it begins to set up a harmonizing resonance designed to convert dangerous EMFs into biologically safe, life-enhancing fields. It even has a USB port so that you can charge your mobile devices.

## Proven Protection

The SafeSpace Plug more than completely reversed the damaging effects on DNA from electromagnetic radiation. Quantum Biology Research
