

EcoLaser

One Device, Many Applications.

Focused light for home, travel, electronics, and self-care.

EcoLaser is an easy-to-use handheld laser device that helps improve the energetic quality of spaces, everyday objects, and personal routines through focused light.

Effects

EcoLaser helps clear, balance, and imprint supportive energies into the spaces and objects you use every day.

Supports the energetic balance of spaces, materials, and everyday environments.

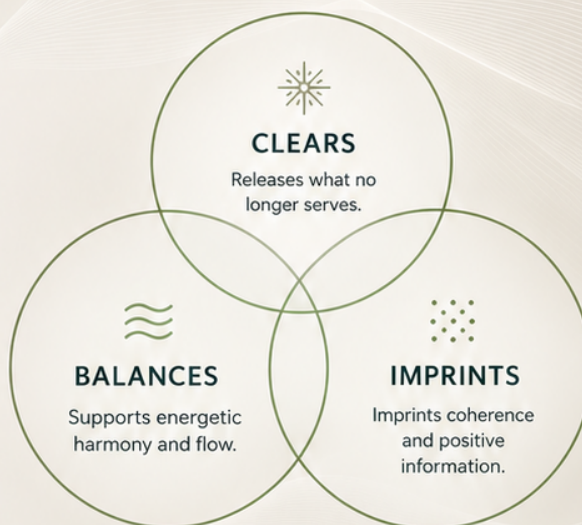

Helps release non-beneficial encodings in stressed environments.

Produces a coherent, transformative light field.

Creates greater harmony in the spaces and objects you use every day.

How It Works

EcoLaser uses coherent, structured laser light for efficient, targeted energetic support. The concentrated, coherent quality of the beam gives EcoLaser a stronger, more focused way to influence the energetic quality of spaces, objects, and everyday environments.

ECOLASER USAGE GUIDE

EcoLaser offers a simple, versatile way to support clearer, more balanced spaces, objects, and personal routines through focused light.

VEHICLES & TRAVEL

Use focused light to support a clearer, more balanced field while you're on the move.

- **Vehicles:** cars, trucks, interior materials, exterior surfaces
- **Travel:** hotel rooms, beds & mattresses, hotel furniture, room electronics, restaurants, bottled water, packaged food

HOME & HOUSEHOLD

- **Interior rooms:** walls, ceilings, windows, vents & fans, doorways, floors, rugs, furniture, beds & mattresses, pantries
- **Appliances:** refrigerators, dishwashers, washers, ovens

ELECTRONICS

- **Electronics:** computers, laptops, cell phones, Wi-Fi routers, land-line phones, outlets, plugs, lights, video consoles, smart TV/DVD, smoke detectors
- **Electric meters:** circuit breakers, smart meters, smart devices

FOOD & WATER

- **Groceries & packaged food:** food containers, drinks, wine bottles
- **Water sources:** water heaters, water pipes, bathtubs, showers, faucets

PROPERTY & OUTDOORS

- **Outdoor areas:** house exterior, trees, plants, garden, garden tools, roof, gutters, house perimeter, pools, patios, sidewalks, outdoor lights, outdoor furniture

PERSONAL CARE & SELF-HELP

Support a clearer, more balanced field around the body and in daily self-care.

- **Personal items:** clothes, shoes, jewelry, stones, eyeglasses, watches
- **Body care & self-help:** lotions, body products, cosmetics, medications, supplements, acupressure points, chakras, pain sites, skin areas

BODY TREATMENTS

Use focused light to support balance, flow, and energetic coherence.

Applied to acupressure points, chakras, or areas of localized discomfort for a gentle, focused experience.

For guided applications, refer to the EcoLaser acupoint treatment charts.

SUGGESTIONS FOR USE

Use EcoLaser in brief, focused sessions. Direct the coherent light toward the area or item you want to address, either by holding it in place for a few seconds or moving it slowly over the surface in smooth, circular or sweeping motions. Smaller areas usually require only a short exposure, while larger rooms or outdoor areas may benefit from several slow passes.

Work with one area or item at a time and allow a few seconds between applications when moving from place to place. The energetic change is intended to remain as long as the area or object stays in a supportive environment, and you can reuse EcoLaser periodically as needed to refresh balance and clarity.

Rooms walls:
use slow circular passes over main surfaces.

Objects & appliances:
trace edges or make gentle oval movements around the item.

Food & liquids:
use brief, focused applications around containers or surfaces.

EcoLaser is a tool for energetic support and is not intended to diagnose, treat, cure, or prevent any disease.

EcoLaser Application Guide

EYEGLASSES

Eyeglasses sit on the face throughout the day and move through many environments, so frames and lenses can pick up unwanted energetic imprinting. Use the EcoLaser over the frames and lenses to help clear these patterns and support a cleaner interaction with the head, eyes, and surrounding field.

BED

Mattresses, pillows, and bedding are exposed to materials, finishes, the body, and nearby electronics. Use the EcoLaser over the main sleep surface to help clear accumulated energetic imprinting and support a cleaner, more balanced environment for rest.

JEWELRY

Gemstones and metals can carry energetic imprinting from manufacturing, previous wear, and environmental exposure. Use the EcoLaser over jewelry to help clear accumulated patterns and support a more natural resonance before wearing it on the body.

BATH

Bath water passes through municipal supplies and household plumbing before reaching the tub. Use the EcoLaser over the bath water before getting in to help clear unwanted energetic imprinting and support a cleaner, more balanced bathing environment.

SMART HOME

Smart-home devices bring multiple electronic signals into the home and can contribute to layered interference fields. Use the EcoLaser on central devices and controls to help clear these patterns and support a more coherent energetic environment.

PETS

Pets are continually exposed to food, water, surfaces, electronics, and their surrounding environment. Use the EcoLaser with their food, water, or favorite resting areas to help clear unwanted energetic patterns and support a more balanced everyday environment.

CAR

Cars are enclosed spaces filled with electronics, wiring, movement, and continual environmental exposure. Use the EcoLaser on key interior surfaces and controls to help clear accumulated energetic patterns and support a cleaner, more balanced vehicle environment.

TRAVEL

Hotel rooms, rental spaces, and travel gear pass through many different environments and may carry energetic imprinting from previous occupants and surroundings. Use the EcoLaser on beds, furniture, luggage, and other personal areas to help establish a cleaner, more balanced field while traveling.

WATER PITCHER

Water passes through municipal supplies, pipes, containers, and storage before reaching the glass or pitcher. Use the EcoLaser over the water container to help clear unwanted energetic imprinting and support a cleaner energetic quality before drinking.

PLANTS

Plants and their containers share the same household environment as other everyday objects and electronics. Use the EcoLaser over plants and pots to help clear accumulated energetic patterns and support a more coherent atmosphere around them.

LAPTOP

Laptops combine electronics, wireless signals, and close contact with the body, creating local interference fields around the device. Use the EcoLaser over the case, keyboard, and screen to help clear these patterns and support a cleaner energetic environment during regular use.

COSMETICS

Cosmetics and body-care products pass through manufacturing, packaging, transport, and storage before use. Use the EcoLaser over bottles, jars, and other containers to help clear unwanted energetic imprinting before applying the products.

COOKING

Cookware, utensils, and preparation surfaces are exposed to manufacturing, repeated heating, food, and water. Use the EcoLaser over key cooking tools and preparation areas to help clear accumulated energetic patterns before preparing food.

FOOD

Food passes through processing, packaging, handling, storage, and transport before reaching the table. Use the EcoLaser briefly over food or its container to help clear unwanted energetic imprinting and support a more natural energetic quality before eating.

CLOTHES

Clothing passes through manufacturing, dyeing, finishing, packaging, handling, and transport before it is worn. Use the EcoLaser over clothing to help clear unwanted energetic imprinting and support a cleaner energetic quality before wearing it on the body.

FAUCET

Faucets and connected plumbing are part of the pathway that delivers household water. Use the EcoLaser on faucets and nearby hardware to help clear accumulated energetic imprinting around the water pathway.

Rooms & walls:
use slow circular
passes over
main surfaces.

Objects & appliances:
trace edges or make
gentle oval movements
around the item.

Food & liquids:
use brief, focused
applications around
containers or surfaces.
